Water pollution control in campus area

Water Pollution Control
(Tanta University, Egypt)

Water Pollution Control
(Tanta University, Egypt)

Description:

Tanta University has a policy regarding preventing water pollution on campus, so the university is keen to take continuous measures to remove any pollutants from the water, whether used for irrigation of landscapes or others used for drinking and human use. These measures include installing devices to remove pollutants, as well as removing color and odor from the water used for irrigation. As for water used for drinking and human use, five-stage water filtration filters are installed for all drinking taps on campus.
